EXPERIMENT 8

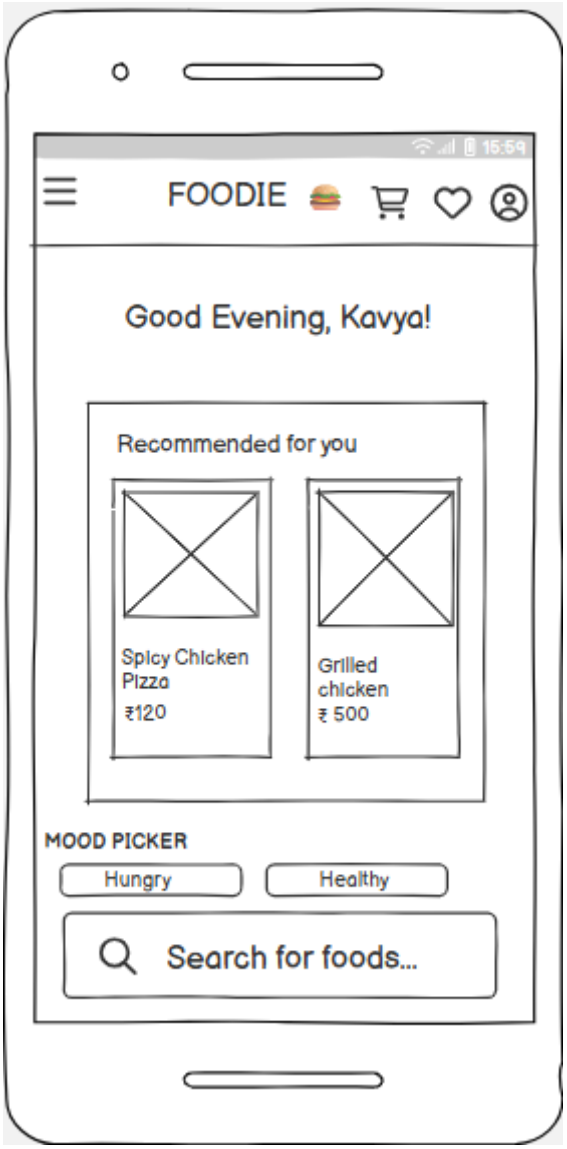
NAME:KANISHKA S ROLLNO:240701227

8. Create storyboards to represent the user flow for your application using Balsamiq

Screen 1: Home Screen (Welcome & Discovery)

The first screen greets the user with a warm message, creating a friendly and personalized feel. It displays recommended food items based on user preferences, helping them quickly choose what they might like.

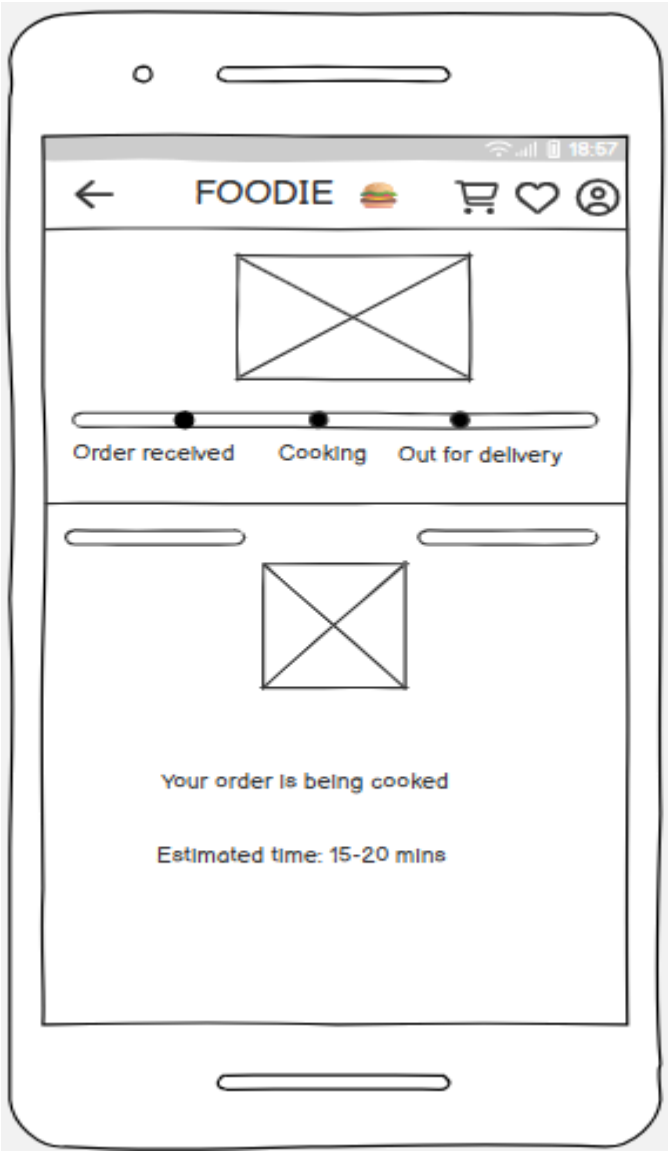
There is also a “Mood Picker” option where users can select how they feel (like hungry or healthy), which makes the app feel more interactive and human-centered. A search bar is provided for users who already know what they want, making navigation faster and easier.



Screen 2: Order Tracking Screen

This screen shows the real-time progress of the order. It includes stages like “Order received,” “Cooking,” and “Out for delivery,” helping the user understand exactly where their food is.

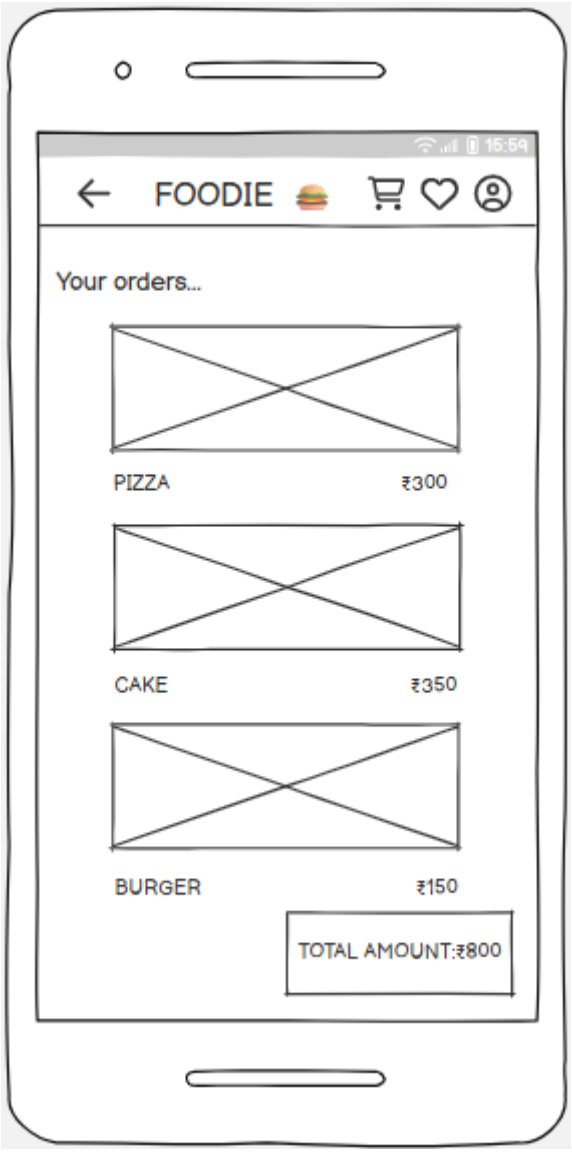
The progress indicator makes the waiting time feel shorter and keeps the user informed. An estimated delivery time is also shown, which builds trust and reduces uncertainty.



Screen 3: Order Summary Screen

In this screen, the user can see all the items they have ordered along with their prices. The layout is simple and clear, making it easy to review the order before payment.

At the bottom, the total amount is displayed, ensuring transparency. This step helps users confirm their choices and avoid mistakes before completing the purchase.



Screen 4: Payment Success Screen

This screen confirms that the payment has been completed successfully. A large checkmark symbol visually reassures the user that everything went smoothly.

There is also a “Back to Home” button, allowing the user to continue browsing or place another order. The design keeps the experience positive and satisfying at the end of the process.
