EXERCISE 9

NAME:KANISHKA S ROLL NO:240701227

Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript

Coding:

Index.html

```
<!DOCTYPE html>
<html>
<head>
  <title>Elegant Form</title>
  <link rel="stylesheet" href="style.css">
</head>

<body>

<div class="container">
  <form id="myForm" class="form-box">
    <h2>Register</h2>

    <div class="input-group">
      <label>Email</label>
      <input type="text" id="email" placeholder="Enter your email">
      <span id="emailError"></span>
    </div>

    <div class="input-group">
      <label>Phone Number</label>
      <input type="text" id="phone" placeholder="Enter phone number">
```

```
            <span id="phoneError"></span>
        </div>

        <button type="submit">Submit</button>
    </form>
</div>

<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.9.0/validator.min.js"></script>
<script src="script.js"></script>

</body>
</html>
```

Style.css

```
body {
    margin: 0;
    padding: 0;
    font-family: 'Segoe UI', sans-serif;
    background: linear-gradient(to right, #667eea, #764ba2);
}

/* Center container */
.container {
    display: flex;
    justify-content: center;
    align-items: center;
    height: 100vh;
}
```

```
/* Form box */
.form-box {
    background: white;
    padding: 30px;
    width: 320px;
    border-radius: 15px;
    box-shadow: 0 8px 25px rgba(0,0,0,0.2);
    text-align: center;
}

/* Heading */
.form-box h2 {
    margin-bottom: 20px;
    color: #333;
}

/* Input group */
.input-group {
    text-align: left;
    margin-bottom: 15px;
}

/* Labels */
.input-group label {
    font-size: 14px;
    color: #555;
}

/* Inputs */
```

```
.input-group input {
    width: 100%;
    padding: 10px;
    margin-top: 5px;
    border-radius: 8px;
    border: 1px solid #ccc;
    outline: none;
    transition: 0.3s;
}

/* Focus effect */
.input-group input:focus {
    border-color: #667eea;
    box-shadow: 0 0 5px #667eea;
}

/* Error text */
span {
    color: red;
    font-size: 12px;
}

/* Button */
button {
    width: 100%;
    padding: 10px;
    border: none;
    border-radius: 8px;
    background: #667eea;
```

```
    color: white;
    font-size: 16px;
    cursor: pointer;
    transition: 0.3s;
}

/* Hover */
button:hover {
    background: #5a67d8;
}
```

Script.js

```
document.getElementById("myForm").addEventListener("submit", function (event) {
    event.preventDefault();

    let email = document.getElementById("email").value;
    let phone = document.getElementById("phone").value;

    let emailError = document.getElementById("emailError");
    let phoneError = document.getElementById("phoneError");

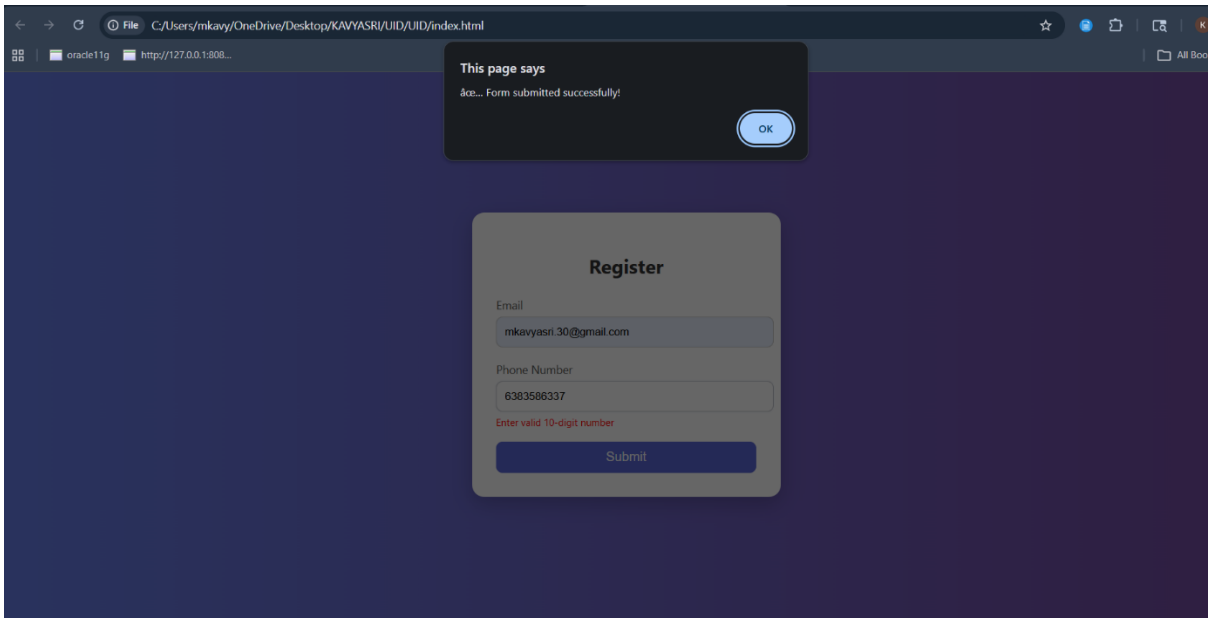
    emailError.textContent = "";
    phoneError.textContent = "";

    let isValid = true;

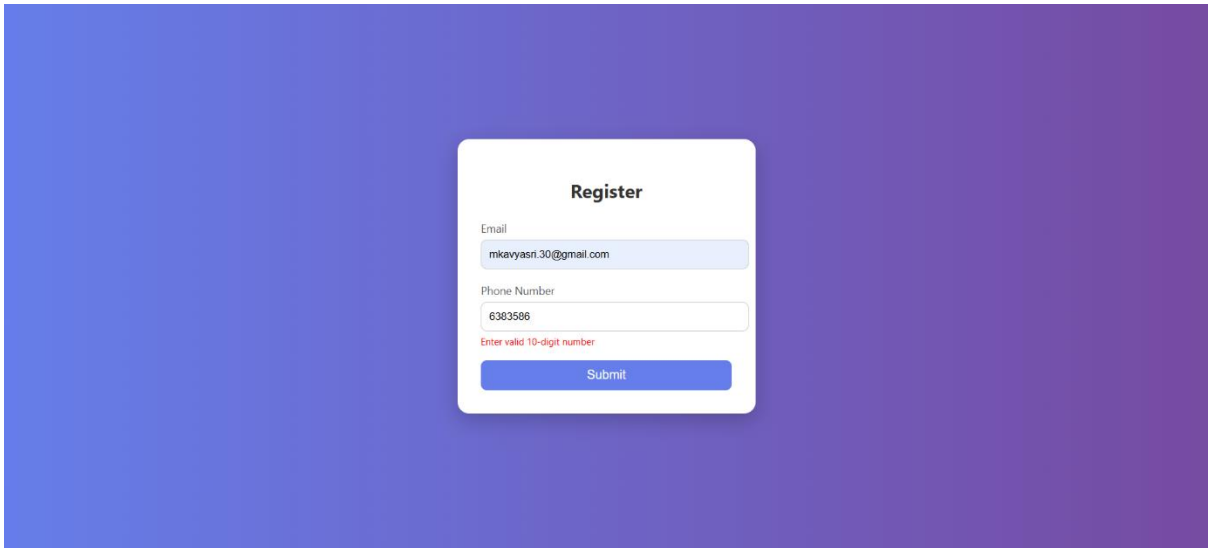
    if (!validator.isEmail(email)) {
        emailError.textContent = "Enter a valid email";
        isValid = false;
    }
```

```
    if (!validator.isMobilePhone(phone, 'en-IN')) {
        phoneError.textContent = "Enter valid 10-digit number";
        isValid = false;
    }

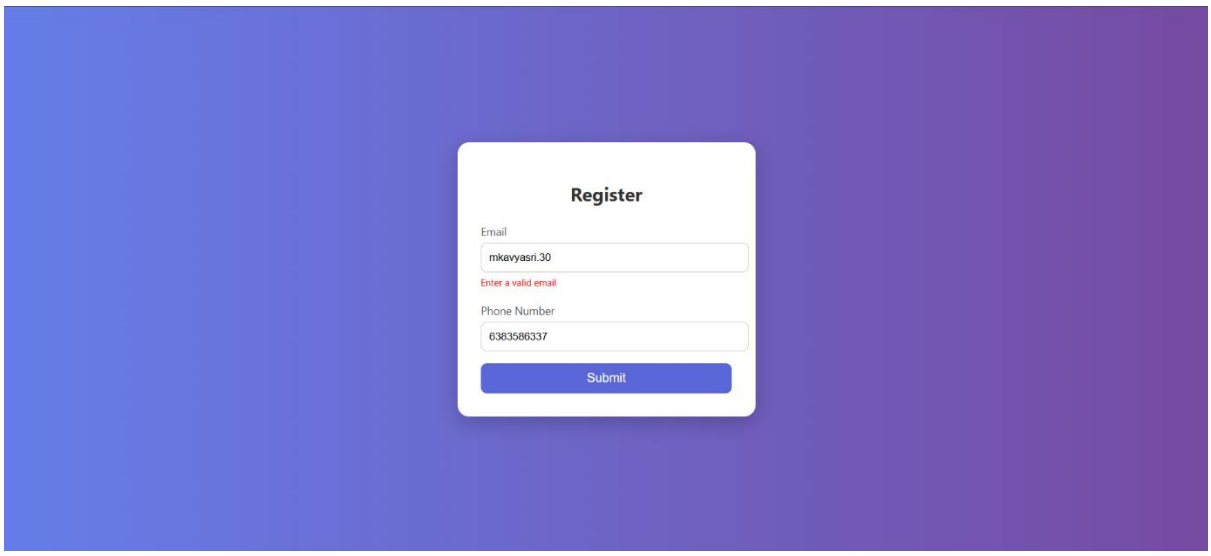
    if (isValid) {
        alert("✅ Form submitted successfully!");
    }
});
```



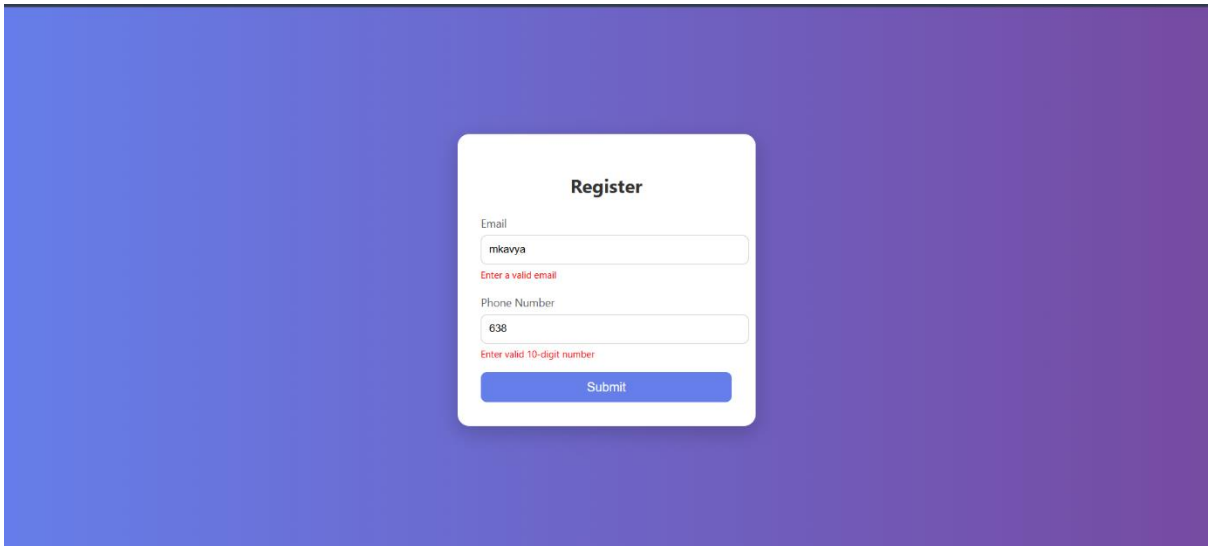
In this step, the form is displayed with input fields for email and phone number. The user can enter the details and click the submit button. At this stage, no validation error is shown



In this step, the email is correct but the phone number is invalid. The system only shows the phone number error message "Enter valid 10-digit number", allowing the user to fix only the incorrect field.



In this case, an invalid email format is entered. The system checks the email using validation and displays an error message "Enter a valid email". This ensures that the user provides a correct email address.



Here, both email and phone number are entered incorrectly. The system validates both fields and displays error messages for each input. This helps the user to correct the mistakes before submitting the form.
